

Take back and recycling of our electrical and electronic equipment (WEEE)

Take back and recycling of our electrical and electronic equipment (WEEE)

The symbol of the crossed-out wheeled bin on our electrical and electronic equipment indicates, that this equipment must not be disposed of into an unsorted waste stream. Waste from electrical or electronic equipment (WEEE) can contain hazardous substances that may harm the environment or human health when disposed of as uncontrolled waste. The proper disposal of our equipment will ensure a proper treatment and helps conserving valuable natural resources.

You can return the electrical and electronic equipment that you have purchased from us back to us.

In order to collect and recycle WEEE Europe-wide, we use the logistics and recycling infrastructure of

envenance GmbH
Nymphenburger Strasse 4
D-80335 Munich

www.envenance-global.com

You can access our return infrastructure by placing a pick-up request with envenance while indicating the model and the serial number of the equipment. Please send a mail to

peri@envenance.com

The envenance GmbH will qualify the pick-up request with us and arrange a pick-up date with yourself. The recycling will then be executed in the country where the WEEE was generated and is free of charge for you. We reserve the right to occasionally charge transport costs.
